

System Hardware Usage

- Disk usage

free -h , -h for human readable

- Cpu usage

lscpu

- Top processes that are running

top -b -n 10 | head -n 10

Top command is user interactive command, it is ~~made to~~ branches or blocks

- ss tynot , this is used for ~~see~~ seeing the active network
netstat ~~can also be used~~

- df -sh for ~~memory~~ memory usage

-s -summary

h - human readable format

So these commands can help to find the working process, or the statistics of the system.

It shows the system hardware usages. Whether there are any issues in the system.

- Disk Usage Script

To monitor and check whether the usage is higher than a particular threshold value

free -h to check the usage

Used awk ~~to~~ ~~set~~ for mount count

NR>1 to remove the header

\$1, \$5, \$6 was used

\$1 - file name

\$6 - mount.

\$5 - usage in %

This usage value is ~~set~~ checked for checking with threshold value.

If it is ~~not~~ greater or equal and alert ~~message~~ message is printed and the log ~~file~~ is added.
